Seal

A personal agent that remembers everything and proves it on Midnight without revealing a word.

Your agent knows your secrets. You just have to trust it.

Medications, money and private notes sit in a cloud database some operator can read.

What changes with Seal

Agents today

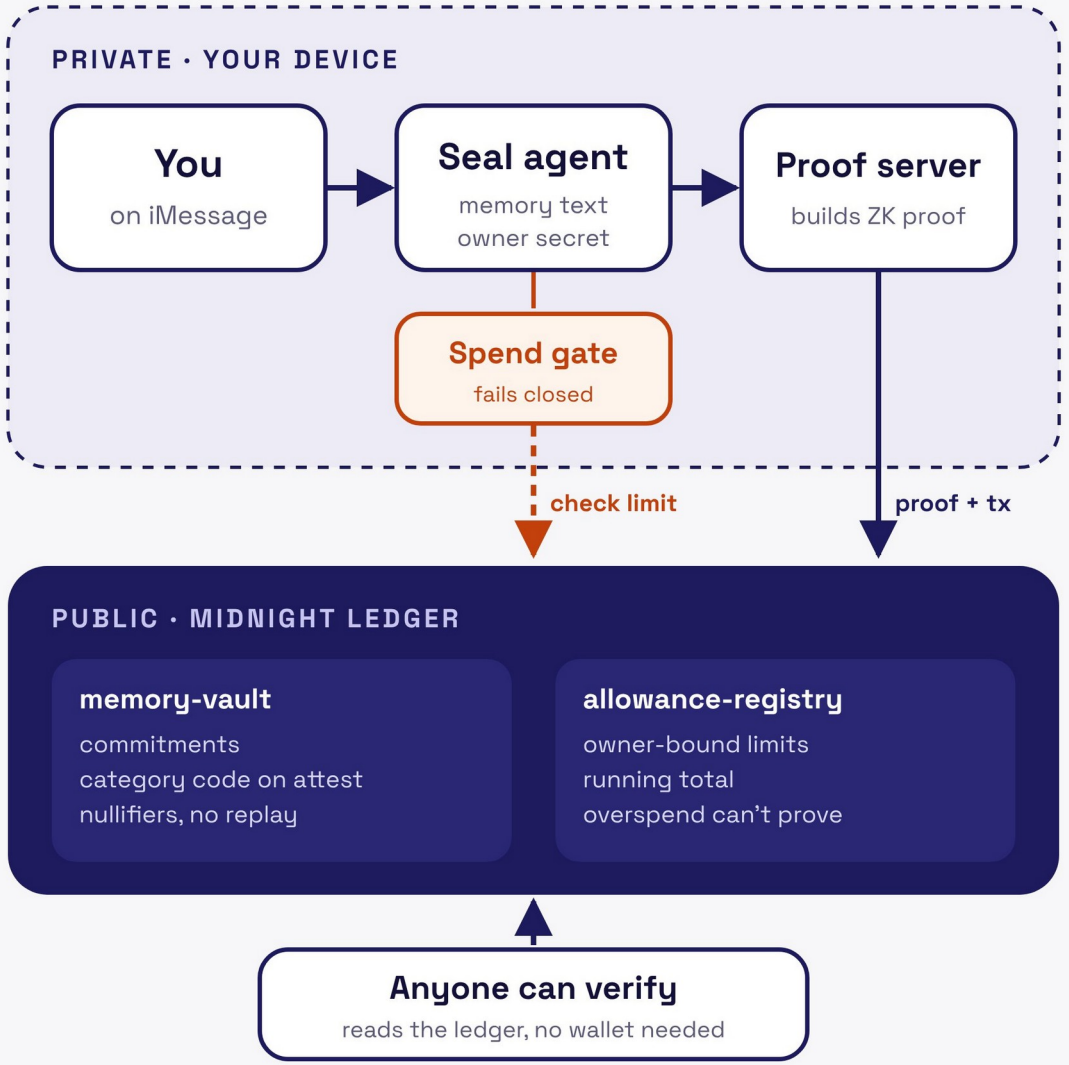

Your memories sit in an operator's database. Spending limits are a promise in code.

With Seal

Memories stay on your device. A ZK circuit enforces every limit, even if the agent is tricked.

How Seal works

Your memory never leaves your device. Midnight stores only commitments, and anyone can check a proof without trusting Seal.

What Midnight sees

DATA	WHERE IT LIVES	WHO CAN READ IT
Memory text	Your device	Only you
Owner secret	Your device	Only you
Memory commitment	Midnight ledger	Anyone, reveals nothing
Category code	Midnight ledger	Anyone, only when you attest
Nullifier	Midnight ledger	Anyone, blocks replay
Spend limit and total	Midnight ledger	Anyone, owner stays hidden
